

# Contents

<b>Preliminaries</b>	<b>1</b>
0.1 Dirac's Bra-ket Notation . . . . .	1
0.2 Basic Linear Algebra . . . . .	2
0.3 Spectral Decomposition . . . . .	4
0.4 Matrix Functions . . . . .	5
0.5 The Tensor Product . . . . .	6
0.6 Labeled Hilbert Spaces . . . . .	7
0.7 The Transpose, and Vector-Representation of Operators . . . . .	8
<b>I Introduction to Quantum Information Science</b>	<b>11</b>
<b>1 The State-Vector Formalism</b>	<b>13</b>
1.1 State Spaces and State Vectors . . . . .	13
1.2 Unitary Evolution . . . . .	15
1.3 Measurements . . . . .	16
1.4 Projective Measurements . . . . .	17
1.5 POVMs . . . . .	18
1.6 Perfect Distinguishability . . . . .	18
1.7 The Bloch Sphere . . . . .	20
<b>2 Multipartite Quantum Systems</b>	<b>23</b>
2.1 Multipartite Quantum Systems . . . . .	23
2.2 No-Cloning . . . . .	24
2.3 Naimark's Dilation Theorem . . . . .	25
2.4 Quantum Teleportation . . . . .	25
2.5 "Quantum" versus "Classical" Information . . . . .	27
2.6 Control Unitaries . . . . .	28
2.7 Decomposing Control Unitaries . . . . .	29

<b>II</b>	<b>Quantum Computing</b>	<b>33</b>
<b>3</b>	<b>Foundations of Quantum Computing</b>	<b>35</b>
3.1	Warm-up: Deutsch’s Algorithm . . . . .	35
3.2	More Examples: Deutsch-Jozsa and Bernstein-Vazirani . . . . .	37
3.3	Quantum Algorithms and Complexity . . . . .	38
3.4	Universal Gate Sets . . . . .	40
3.5	Simon’s Algorithm . . . . .	42
3.6	Grover’s Algorithm for Unstructured Search . . . . .	44
<b>4</b>	<b>(More) Quantum Algorithms Based on the Fourier Transform</b>	<b>47</b>
4.1	The Classical and the Quantum Fourier Transform . . . . .	47
4.2	Period Finding in $\mathbb{Z}/N\mathbb{Z}$ . . . . .	49
4.3	Period Finding in $\mathbb{Z}/N\mathbb{Z} \times \mathbb{Z}/N\mathbb{Z}$ . . . . .	50
4.4	The Hidden Subgroup Problem . . . . .	51
4.5	Computing the Quantum Fourier Transform . . . . .	53
4.6	Shor’s Algorithm for Period Finding in $\mathbb{Z}$ . . . . .	55
4.7	Continued Fractions . . . . .	56
4.8	Shor’s Factoring Algorithm . . . . .	59
4.9	Shor’s Discrete-Logarithm Algorithm . . . . .	60
